SUMMARY

Hands-on Software Engineer with 3+ years of experience building internal enterprise applications, ERP-integrated systems, database-driven workflows, and production deployments. Strong in backend/frontend development, SQL databases, REST API integration, server deployment, and troubleshooting. Electrical Engineering graduate with control system and computer concentration, comfortable working with operational systems, devices, data flow, and manufacturing/logistics business processes.

CORE TECHNICAL

- Backend & Integration: Java Spring Boot, .NET, ExpressJS, REST API, WebSocket, ERP data synchronization, approval workflow, audit trail.
- Frontend: React TypeScript, Angular, Material UI, Redux, internal dashboard and admin systems.
- Database: Microsoft SQL Server, PostgreSQL, MySQL, MongoDB; schema design, query, data patching, validation, and reporting.
- Deployment & Infra: Linux/Windows server deployment, SSH, RDP, IIS, NGINX, Apache, Docker, Git/GitLab, GitLab CI/CD, monitoring/logging basics.
- Operational Domain: procurement, warehouse, inventory, document tracking, KPI/performance system, logistics workflow, barcode/handheld/camera device integration.

WORK EXPERIENCE

PT FTS Automotive Indonesia — Software Engineer - Purchase **Jul 2025 - Present**
App & ERP Integration

- Develop and maintain a Purchase application for material and non-material goods integrated with company ERP.
- Implement master data modules for items, suppliers, packaging units, warehouse locations, validation, versioning/history, and audit trails.
- Build multi-level role-based approval workflows for requisitions and purchase orders.
- Implement quantity conversion for inner/outer/pallet packaging to support stock and costing accuracy.
- Develop budget management, cost-center setup, consumption monitoring, and overspend alerts/notifications.
- Implement supplier selection, PO creation, and two-way ERP synchronization for create, update, and status reconciliation.
- Integrate field devices such as handheld terminals, barcode scanners, and camera capture for receiving, picking, and verification.
- Support production readiness with GitLab, Docker, NGINX reverse proxy, database migration, testing, logging, and monitoring.

PT Acset Indonusa Tbk (Member of Astra)- Fullstack Developer **Aug 2023 - Jul 2025**

- Developed and maintained internal applications: E-Doc, I-Perform, Portal Inovasi, Portal API, and E-Permit module.
- Implemented frontend features using ReactJS, TypeScript, Angular, Material UI, Redux, and related libraries.
- Implemented backend features using Java Spring Boot, .NET, ExpressJS, Golang/Gin, Laravel, and database integrations.

- Worked with Microsoft SQL Server, MySQL, PostgreSQL, and MongoDB for application data, reporting, and operational workflows.
- Deployed applications to Linux and Windows servers using SSH, RDP, IIS, PM2, NGINX reverse proxy, Apache, DNS/public endpoints, Git, GitLab, and GitLab CI/CD.
- Handled bug fixing, support, application monitoring, data checking, and documentation for internal users.

PT Integrasi Logistic Cipta Solusi - Fullstack Developer **Oct 2022 - Sep 2023**

- Improved logistics web applications including search, document tracking, assign truck, and operational workflow features.
- Performed bug fixing, application monitoring, manual database patching, and release support during application maintenance.
- Implemented frontend using TypeScript and Material UI, and backend using ExpressJS and MongoDB.
- Used Prometheus and Grafana for basic application and database monitoring.

RELEVAN PROJECT

Purchase App / ERP Integration **Jul 2025 - Present**

- ERP-integrated procurement system with requisition, approval, supplier selection, purchase order, budget, warehouse/inventory, and audit trail modules.
- Includes master data, packaging conversion, role-based approval, dashboards, ERP synchronization, REST/WebSocket APIs, field device integration, Docker, GitLab CI/CD, and NGINX.

Individual Performance **Mar 2024 - Sep 2024**

- KPI tracking and performance evaluation system with KPI calculation, employee rank promotion logic, and scheduler/background jobs.
- Stack: .NET Core, .NET Framework, Microsoft SQL Server.

Electronic Documentation **Aug 2023 - Dec 2023**

- Internal document management system with project/location-based folder access, permissions, document viewing/downloading, transfer workflow, and hard-copy tracking.
- Stack: ReactJS, Material UI, Redux, ExpressJS, Sequelize, Microsoft SQL Server.

PARAMA Logistics Platform **2022 - 2023**

- Logistics platform features for booking, payment, seat selection, truck tracking, customs document handling, and assign truck workflow.
- Stack: TypeScript, Material UI, Redux, ExpressJS, MongoDB, Prometheus, Grafana.

EDUCATION

Bachelor of Electrical Engineering **Aug 2016 - Aug 2021**

Sriwijaya University

- Cumulative GPA : 3.91 / 4.0
- Undergraduate Thesis Title : Optimalization Control Steering using PID with Particle Swarm Optimization
